

# Open applications and evidence landscape

Mr T.G. Bhowa

2016

This map is part of a series of maps on the evidence-informed decision-making (EIDM) landscapes in different countries in Africa. The series comprises 25 maps and is available from the Africa Evidence Network. This is map 2 in the series. Maps were produced as part of the bursary conditions for attendance at Evidence 2016 (<http://evidenceconference.org.za/>). Bursaries were provided as part of the UJ-BCURE programme, funded by the UK's Department for International Development (DFID).

# Open Applications & Evidence landscape

- \* Overview
  - \* Zimbabwe
  - \* Government ministries, policymakers, librarians, researchers, civic society
  - \* Convergence between Evidence & Open Applications
  - \* Research support systems
  - \* Inadequate awareness, capacity building
  - \* Little or no engagement amongst stakeholders

# Converge & Engage

Key:

OA – Open Access

OD – Open Data

OS – Open Source

ILS – Information Literacy Skills

# Conclusion

- \* Enhance Research support systems, Information Literacy Skills
- \* Convergence & engagement
- \* Upscale convergence of Open Applications and evidence based research
- \* Open Applications Competencies
- \* Evidence jungle
